

# **Climate Alarmist Admits The Real Motive Behind Warming Scare: Redistribution of Wealth**

TN Note: This article is right on the money. Climate alarmists are thoroughly disingenuous when they cloak their true goals of global redistribution of wealth. This is nothing short of a complete replacement of Free Enterprise and Capitalism in favor of Technocracy - aka Green Economy and/or Sustainable Development.

Fraud: While the global warming alarmists have done a good job of spreading fright, they haven't been so good at hiding their real motivation. Yet another one has slipped up and revealed the catalyst driving the climate scare.

We have been told now for almost three decades that man has to change his ways or his fossil-fuel emissions will scorch Earth with catastrophic warming. Scientists, politicians and activists have maintained the

narrative that their concern is only about caring for our planet and its inhabitants. But this is simply not true. The narrative is a ruse. They are after something entirely different.

If they were honest, the climate alarmists would admit that they are not working feverishly to hold down global temperatures — they would acknowledge that they are instead consumed with the goal of holding down capitalism and establishing a global welfare state.

Have doubts? Then listen to the words of former United Nations climate official Ottmar Edenhofer:

“One has to free oneself from the illusion that international climate policy is environmental policy. This has almost nothing to do with the environmental policy anymore, with problems such as deforestation or the ozone hole,” said Edenhofer, who co-chaired the U.N.’s Intergovernmental Panel on Climate Change working group on Mitigation of Climate Change from 2008 to 2015.

So what is the goal of environmental policy?

“We redistribute de facto the world’s wealth by climate policy,” said Edenhofer.

For those who want to believe that maybe Edenhofer just misspoke and doesn’t really mean that, consider that a little more than five years ago he also said that “the next world climate summit in Cancun is actually an economy summit during which the distribution of the world’s resources will be negotiated.”

Mad as they are, Edenhofer’s comments are nevertheless consistent with other alarmists who have spilled the movement’s dirty secret. Last year, Christiana Figueres, executive secretary of U.N.’s Framework Convention on Climate Change, made a similar statement.

“This is the first time in the history of mankind that we are setting ourselves the task of intentionally, within a defined period of time, to change the economic development model that has been reigning for at least 150 years, since the Industrial Revolution,” she said in anticipation

of last year's Paris climate summit.

“This is probably the most difficult task we have ever given ourselves, which is to intentionally transform the economic development model for the first time in human history.”

The plan is to allow Third World countries to emit as much carbon dioxide as they wish — because, as Edenhofer said, “in order to get rich one has to burn coal, oil or gas” — while at the same time restricting emissions in advanced nations. This will, of course, choke economic growth in developed nations, but they deserve that fate as they “have basically expropriated the atmosphere of the world community,” he said. The fanaticism runs so deep that one professor has even suggested that we need to plunge ourselves into a depression to fight global warming.

Perhaps Naomi Klein summed up best what the warming the fuss is all about in her book “This Changes Everything: Capitalism vs. the Climate.”

“What if global warming isn't only a crisis?” Klein asks in a preview of a documentary inspired by her book. “What if it's the best chance we're ever going to get to build a better world?”

In her mind, the world has to “change, or be changed” because an “economic system” — meaning free-market capitalism — has caused environmental “wreckage.”

This is how the global warming alarmist community thinks. It wants to frighten, intimidate and then assume command. It needs a “crisis” to take advantage of, a hobgoblin to menace the people, so that they will beg for protection from the imaginary threat. The alarmists' “better world” is one in which they rule a global welfare state. They've admitted this themselves.

# **First, The EPA Came For The Navajo; Next, They're Coming For Everyone**

TN Note: The unelected and unaccountable Technocrats embedded within the EPA must be stopped. The Clean Power Plan authorized by Obama threatens to cripple the American economy. The fact is, the power generation plants on the Navajo Nation are virtually 100% clean already, but that doesn't impress the EPA. This only demonstrates that the real EPA/Technocrat goal reaches far beyond the excuse of creating "clean energy". Rather, it demonstrates a grab for power and control over people.

Before the U.S. Supreme Court delayed it, the Environmental Protection Agency's Clean Power Plan (CPP) sought to impose a costly cap-and-trade carbon emissions scheme on the nation's power grid—the same rule Congress has considered and rejected several times since 2007.

A 1,500-page regulatory behemoth, the CPP specifies carbon dioxide reduction targets for 47 states as well as three Native American tribal jurisdictions, with the overall goal of reducing carbon emissions by 32 percent below 2005 levels by 2030. In theory, the CPP will reduce the

global average temperature by 0.018 degrees Celsius by 2100.

For most Americans, reducing carbon emissions is a sort of gauzy, feel-good aspiration. Reducing carbon is all fine and dandy until you realize your electric bill may go up 30 percent or more, food and water may become costlier, and jobs may be lost, all for a projected amount of planetary cooling that is well within the wide margins of error of climate models. Not to mention that these climate models have not even remotely tracked with real-world observations.

Further, there's that nagging issue that carbon dioxide isn't even a toxic pollutant and therefore ought not to concern the EPA. Rather, carbon dioxide is a plant fertilizer that we all aim to exhale for as long as we can on this blue-green orb we call home.

## **Need Jobs, Navajo? Tough**

In 2008, ten Democratic senators opposed cap-and-trade, with Sen. Sherrod Brown (D-Ohio) noting it would impose "undue hardship on our states, key industrial sectors, and consumers." What was true for a proposed law is still true for a regulation that does the same thing.

Case in point, the EPA's CPP, if enacted, will wreak havoc in Arizona and the Navajo Nation, at 27,413 square miles an area larger than West Virginia sprawling across three states with a population of 174,000 people (another 158,000 claim Navajo ancestry, but live elsewhere), many suffering from lack of jobs and poverty as well as no running water or electricity.

The Navajo Nation is home to two large, coal-fired power plants. The Navajo Generating Station in northern Arizona near the town of Page, Glen Canyon Dam, and Lake Powell, saw its first of three units open in 1974. Ironically, this generating station owes its construction to environmental opposition to additional hydroelectric dams on the Colorado River downstream from the Glen Canyon Dam and upriver from the Grand Canyon.

Environmentalists suggested that a nuclear power plant be built in place

of the dams! The Navajo Generating Station was built instead, fueled by nearby sources of clean coal. The plant employs about 500 people, 80 percent of whom are Navajo.

## **First Decentralized Eco-Friendly Crypto Currency EDRC Debuts**

TN Note: Necessity is the mother of invention. As calls for a cashless banking system increase, entrepreneurs are rushing to fill the void. Bitcoin is energy intensive to create. The answer to that is this “Eco-Friendly” blockchain crypto-currency. ERDC is not the end of the invention, as many others are throwing new products into the mix. In the end, it is almost certain that some major central bank (e.g, Bank of England) will enter the game by acquiring another currency company, or inventing a new crypto-currency of its own. If the central banking system controls such a currency, it will spell the end of commercial banks throughout the world.

First Decentralized Eco-friendly Crypto Currency EDRC to Change

World of Money for the Better — Blockchain has launched the first decentralized eco-friendly crypto currency EDRCoin. It is based on USA-Dollar rate and can be used for transaction of goods and services all over the world

The fast evolving world of crypto currency is reportedly buzzing with the latest launch of first decentralized eco-friendly crypto currency EDRCoin. Developed by Blockchain, the futuristic currency is aimed to change the world of money for better.

With its costs based on the value of USA-Dollar rate (1EDRC =\$1), EDRC can be deployed for internet shopping, virtual game payments and for the transaction of goods and services in any country.

“We are glad to announce the launch of our latest crypto currency EDRC which is going to add a new positive dimension to the world of money. The advanced decentralized crypto currency is themed on a green mining principle that banks on sustainable energy-efficient policies for generating money”, smiled one of the chief spokespersons from Blockchain.

Esteemed philanthropist and business tycoon Charles Chen partnered up with Marco A. Fernandez, a long-term IT entrepreneur, to develop and co-found EDRC. The main objective behind EDRC is the creation of a general-purpose payment system and steady exchange rate, themed on USA-Dollar rate- with due regard to the environment.

“While the regular cryptocurrencies unmindfully destroy the earth’s ecology with their mining operations, EDRC is careful about protection of natural resources. Our unique technology takes to utilization of alternate energy like solar panels and we make sure to leave no carbon footprint on Mother Nature.”

EDRC’s eco-friendly operations are carried in collaboration with independent private farms situated in different parts of the globe. 7 percent of the income generated from EDRC system would be utilized for the restoration of mangrove forests in Asia and the development of new solar panels.

Based of PoS (Proof-of-Stake) method, EDRC uses Skrypt function for

hashing.

“Our developers have considered the issue of hacking attacks common with POW-based existent digital money and addressed all such flaws with the new advanced EDRC. Our cutting edge crypto currency assures complete credibility and solid protection from any external attack, theft or hacking invasions. To ensure complete security, user’s personal and financial data would be kept private.” explained the Blockchain manager.

EDRC mining is ongoing and would supposedly complete by 31st December, 2017, with the release of around 22 million coins.

“As our PoS system capitalizes on the users owning coins to validate the transactions, one transaction per day would be rewarded by an increment of 0.35 percent of the wallet-total. EDRCoins are immaterial & follows a purely mathematical approach that works with digital code.”

Speaking further, the manager emphasized on an edgy feature of EDRC that allows seamless number of accounts for creating and mining. Given its decentralized structure and antitrust philosophy, EDRC mining is guarded from artificial increment of cryptocurrency number. The banking system cannot exert any control on EDRC mining and hence can’t affect its value and quantity.

“EDRC is the best thing from the contemporary financial world. Join the EDRC community now for a welcome change in the perception of money”, the manager added in.

Blockchain was founded in 2015 by Hong-Kong businessman Charles Chen and Marco A. Fernandez, long-term IT entrepreneur, with the goal to improve our planet’s health through the development of an environment-friendly digital currency.
